Lecture 1

Introduction to Database, DBMS, Data and Information

Course Objectives

- The overall aim of this course is to develop students' knowledge about
 - Databases Modeling and Development
 - SQL and Database implementation in MS SQL Server

Course Material

- Modern Database Management (11th Edition) 11th Edition by Jeffrey A. Hoffer, Ramesh Venkataraman , Heikki Topi
- Database Systems: A Practical Approach to Design, Implementation and Management (4th Edition) by Thomas M. Connolly, Carolyn E. Begg

Grading Scheme

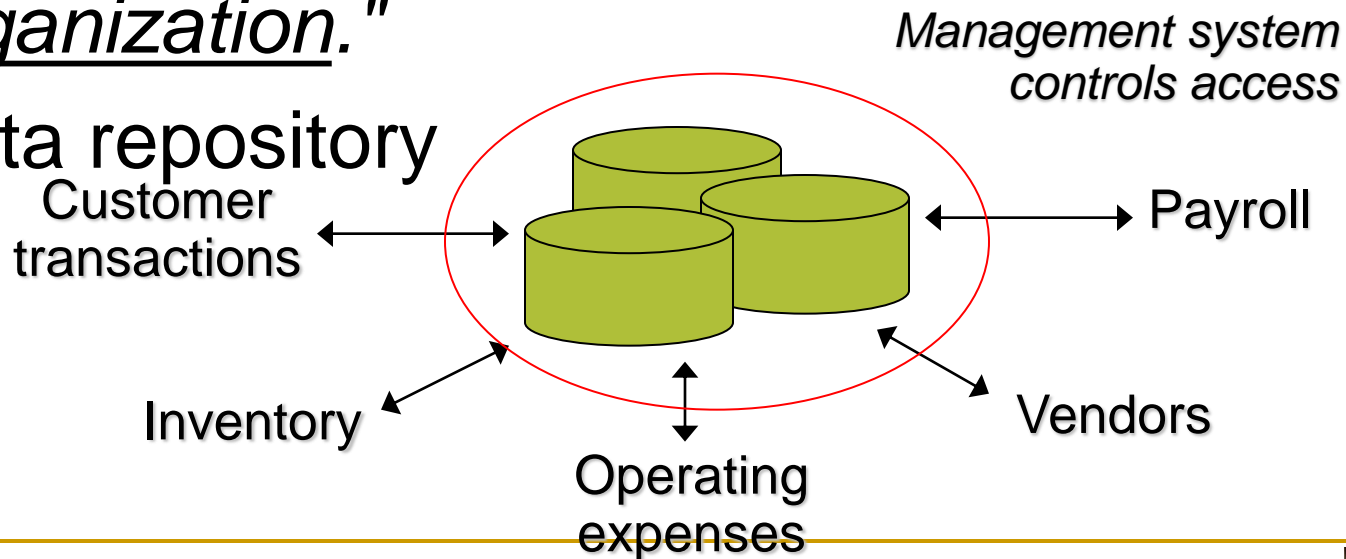

- Yet to be decided

What is Database?

- Definition:

"A shared collection of logically related data, and a description of this data, designed to meet the information needs of the organization."

- Data repository

What is a database and DBMS?

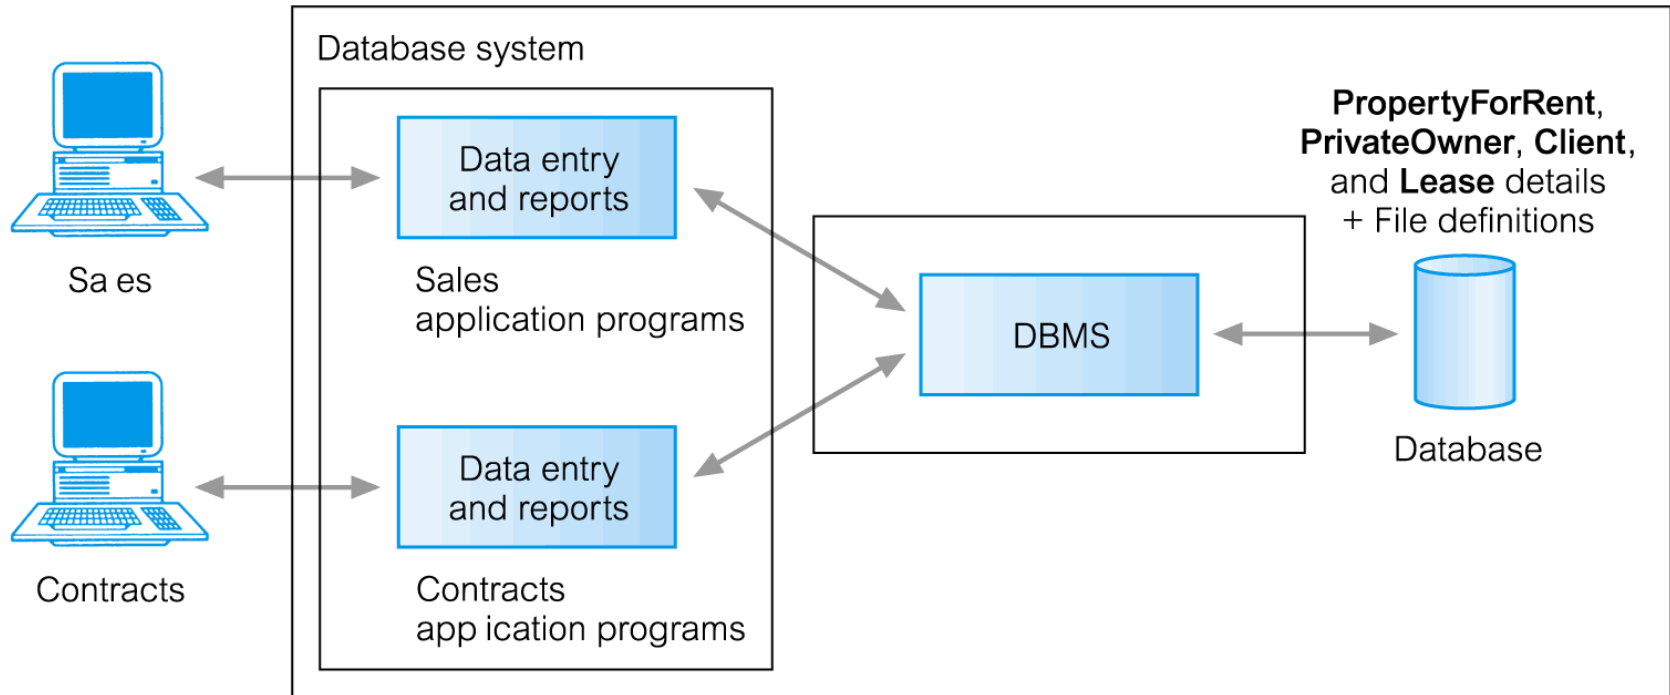

Database

- ❑ Shared collection of logically related data (and a description of this data), designed to meet the information needs of an organization.
- ❑ System catalog (metadata) provides description of data to enable program–data independence.
- ❑ Logically related data comprises entities, attributes, and relationships of an organization's information.

Database Management System (DBMS)

- ❑ A software system that enables users to define, create, maintain, and control access to the database.

Example DBMS

PropertyForRent (propertyNo, street, city, postcode, type, rooms, rent, ownerNo)

PrivateOwner (ownerNo, fName, lName, address, telNo)

Client (clientNo, fName, lName, address, telNo, prefType, maxRent)

Lease (leaseNo, propertyNo, clientNo, paymentMethod, deposit, paid, rentStart, rentFinish)

Database

- “A shared collection of logically related data (and a description of this data), designed to meet the information needs of an organization.”

Components of DBMS

- *Data definition language (DDL) - Permits specification of data types, structures and any data constraints.*
- *Data manipulation language (DML) - General enquiry facility (query language) of the data.*
- *Controlled access to database may include:*
 - ❑ *a security system*
 - ❑ *an integrity system*
 - ❑ *a concurrency control system*
 - ❑ *a recovery control system*

Database Management System
